

**60525 – 12.8 grams**  
**Impact Melt Breccia**

*Figure 1: This little potato is about 4 cm long. S73-20495*

### **Introduction**

60525 was collected as a rake sample – see section on 60501.

### **Petrography**

Warner et al. (1976) described 60525 as heterogeneous, with half of matrix with poikilitic texture and half with subophitic texture. There are numerous inclusions of plagioclase and lithic fragments (figure 2). Minor minerals include metallic iron (9% Ni), zircon, spinel and a K-rich phase. Pyroxenes are not equilibrated (figure 3).

### **Chemistry**

Warner et al. (1976), McKinley et al. (1983) and possibly Korotev (1994) determined the chemical composition of 60525 (table).

### **Processing**

There is only one thin section of 60525.
